MOBILE-PERDIS

Comprehensive staff planning in public transport delivers satisfied employees and reliable services

MOBILE PERDIS is the central platform for staff deployment planning, scheduling and operational management in public transport. It empowers transport companies to manage their drivers efficiently, respond to changes in real time and ensure transparency regarding resources, processes and operational status – all within a single system.

Facilitating flexible and reliable operation

- **Deploying staff more efficiently**
  Coordinate duty changes, cover arrangements and absences quickly and efficiently
- **Ensuring reliable operation**
  Respond to last-minute changes and unplanned events in real time
- **Optimising dispatch more swiftly**
  Automated suggestions speed up the allocation of services and tasks
- **Managing complexity with confidence**
  Keep track of staff qualifications and availability, as well as collective agreement and statutory requirements, at all times
- **Attracting and retaining staff**
  Fair shift planning that takes staff members' individual preferences into account boosts satisfaction and reduces the dispatch team's workload

MOBILE-PERDIS

Versatile, modular & forward-looking

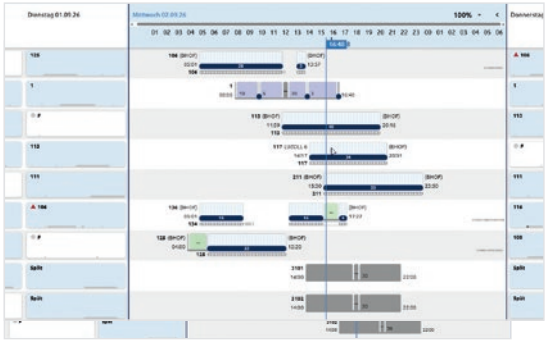
MOBILE-PERDIS enables you to integrate all HR-related processes into a single, integrated solution – from long-term shift planning to day-to-day operational management. The platform helps you to make the best use of your human resources, digitise processes and improve operational quality sustainably.

- **Greater operational flexibility** thanks to rapid, real-time response to disruptions, service changes and unplanned events.
- **Greater efficiency in staff deployment planning and dispatching** based on automated suggestions, digital processes and up-to-date staff data at every stage of the planning process.
- **Greater transparency and stability** by means of direct communication with drivers, integrated operational processes and operational information that is always available.

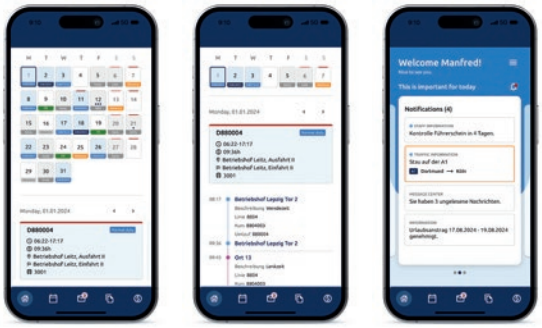
MOBILE-PERDIS keeps pace with your needs. The platform combines staff deployment planning, dispatching, driver communication, time and attendance management, holiday planning, reporting and depot management in a single integrated solution. Thanks to open interfaces, MOBILE-PERDIS can be seamlessly integrated into existing system landscapes – from planning systems such as MOBILE-PLAN, ITCS and HR solutions, right through to workshop and billing systems. This results in seamless and consistent data flows that do away with duplicate data entry. Moreover, the modular design allows you to roll out the system in stages and add new features at any time.

Better overview. Increased efficiency. Greater scope for action.

Take a look at the illustrations below to see how MOBILE-PERDIS supports dispatchers and drivers with their day-to-day planning, management and communication.



All the relevant information for day-to-day planning at a glance: The deployment window facilitates the flexible allocation of tasks, the management of absences and the rapid adjustment of staff deployment in the event of last-minute changes.



Share information more quickly, collaborate more effectively: The ComCentre staff portal brings together duty rosters, holiday balances, requests, messages and applications in a single place. This simplifies communication and coordination, thus boosting staff satisfaction.
