URmove Mobility App

The white-label app that covers all mobility needs

Whether it's quickly buying a public transport ticket, easily finding and booking a rental bike or e-scooter nearby, checking the availability at Park&Ride car parks or using an on-demand shuttle – with the URmove Mobility App, you can offer your customers easy access to all mobility services in your region. Thanks to the white-label approach, you can quickly integrate the URmove Mobility App into your existing sales channels.
Stay flexible: Additional mobility services can be integrated at any time, and you can customise it to suit your specific requirements.

Reach more customers, keep them better informed, and boost your sales

- **Everything in a single app**
  Public transport tickets, sharing and on-demand services, parking tickets and so much more
- **Find transport options quickly**
  Thanks to a detailed map view with real-time data
- **Close customer contact**
  A wide range of communication and feedback options, such as 'message of the day' or push notifications
- **Current sales figures at a glance**
  Simple, fast access to statistics and sales figures via the built-in service portal

URmove Mobility App

One app – The full range of mobility services

The right public transport ticket for everyone

From single tickets and multi-journey tickets to monthly passes – make your entire range of tickets for your region available as a mobile ticket. The Deutschlandticket can be added to the wallet as well.

Sharing, on-demand transport and Park&Ride in one app

Rental bike, e-scooter, or an on-demand shuttle today? Offer your customers an app that covers their entire journey. Sharing services, on-demand transport, and Park&Ride options complement traditional public transport, bridge first- and last-mile gaps, and enable convenient, demand-responsive mobility.
Bring all relevant mobility services together in one central app to create a seamless mobility experience. Attract new customer groups and boost the appeal of your offering in the long term.

Targeted use of vouchers

Boost customer loyalty and reward your customers with vouchers and discount codes (e.g. for marketing campaigns, prize draws or discounted tickets). These are available as a single-use or multi-use code.

Customer communication and support in one platform

There's a sudden disruption on the route, or you are launching a special marketing campaign for your customers? Use push notifications to communicate service updates and marketing campaigns, while the integrated built-in service portal enables efficient customer support, ticket management, and sales reporting.

Your app, your design

Thanks to the white label approach, you will receive a mobility app that can be fully tailored to your corporate design in no time at all and without any additional development work. Better yet, you benefit from an accessible solution that meets all WCAG 2.1 A and AA requirements, meaning it is accessible to all user groups.
